

AX-82 AX-2.4806

Material-No.: 2.4806

Standards

EN ISO 18274:	S Ni 6082 (NiCr20Mn3Nb)
AWS A5.14:	ERNiCr-3

Properties

TIG-rod/solid wire for welding of nickel-based alloys, creep resistant steels, cryogenic materials and dissimilar joints. Suitable for operating temperatures down to -196°C and up to +900°C.

Cleanliness of the workpiece in the weld seam area is a prerequisite for a crack-free connection. A weld pool backing is recommended for thin plates and root seams. For V- and X-seams, opening angle at least 70°.

Important base materials / Important applications

NiCrFe-alloys like NiCr15Fe (2.4816), NiCr23Fe (2.4851), creep resistant austenitic steels like X10NiCrAlTi32-20 (1.4876) and X5NiCrAlTi31-20 (1.4958), cryogenic steels like X8Ni9 (1.5662) and dissimilar joints with operating temperatures above >300°C and/or post-weld heat treatment.
